

Durability Analysis on Solar Energy Converters containing Polymeric Materials

Steffen Jack, Michael Köhl,
Karl-Anders Weiß, Jochen Wirth

Fraunhofer Institute for Solar Energy Systems ISE,
Freiburg, Germany

COMSOL Conference
Hannover, 4-6.11.2008

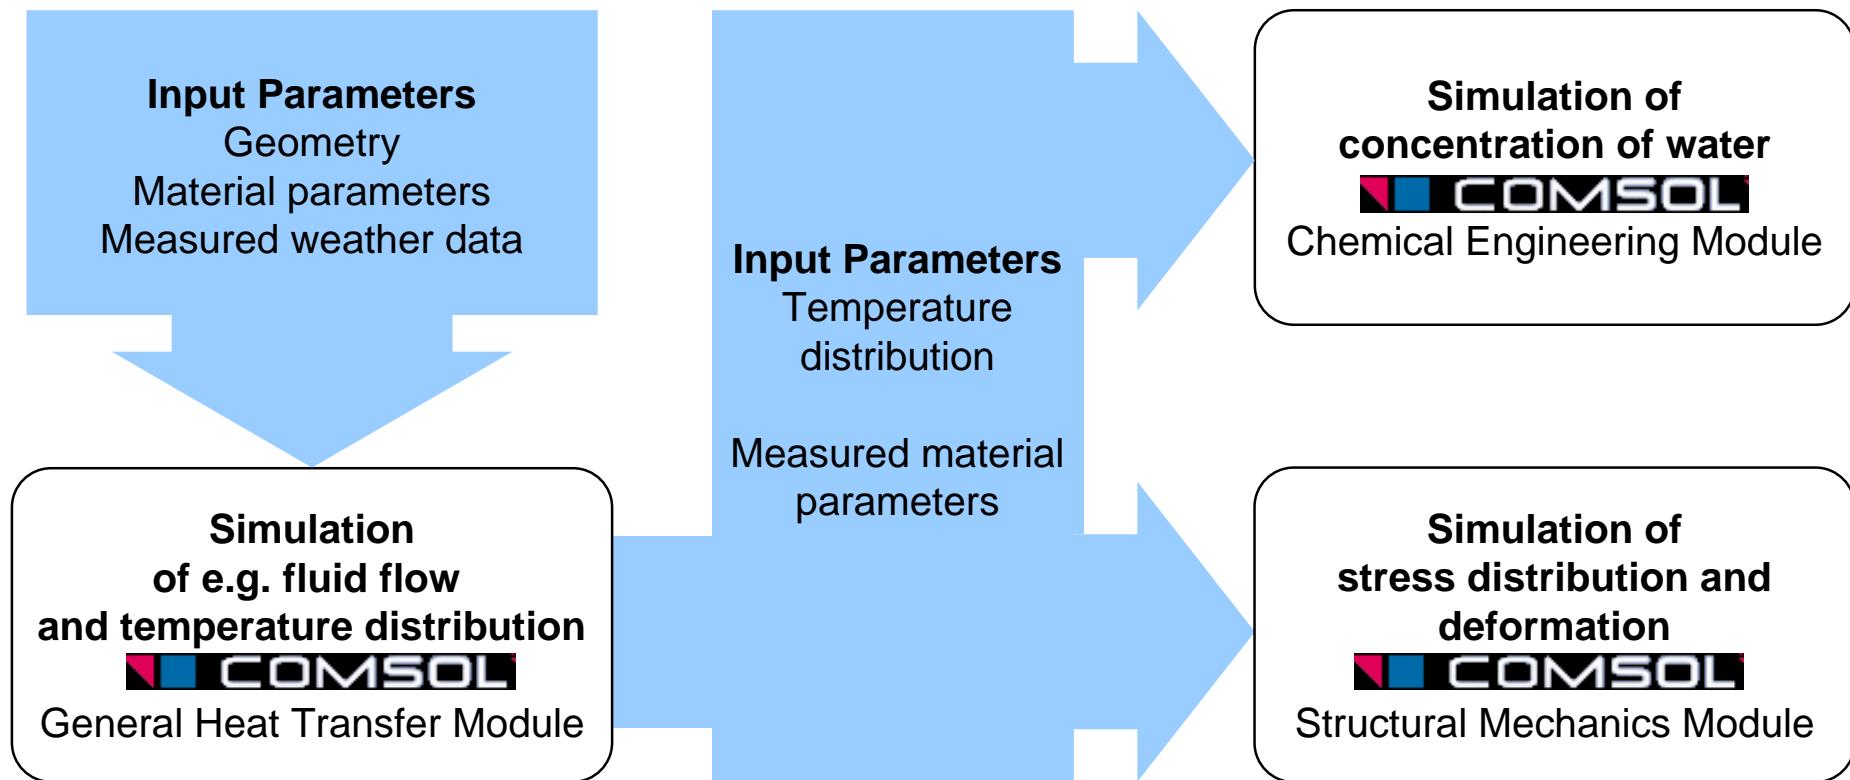

Fraunhofer Institut
Solare Energiesysteme

Content

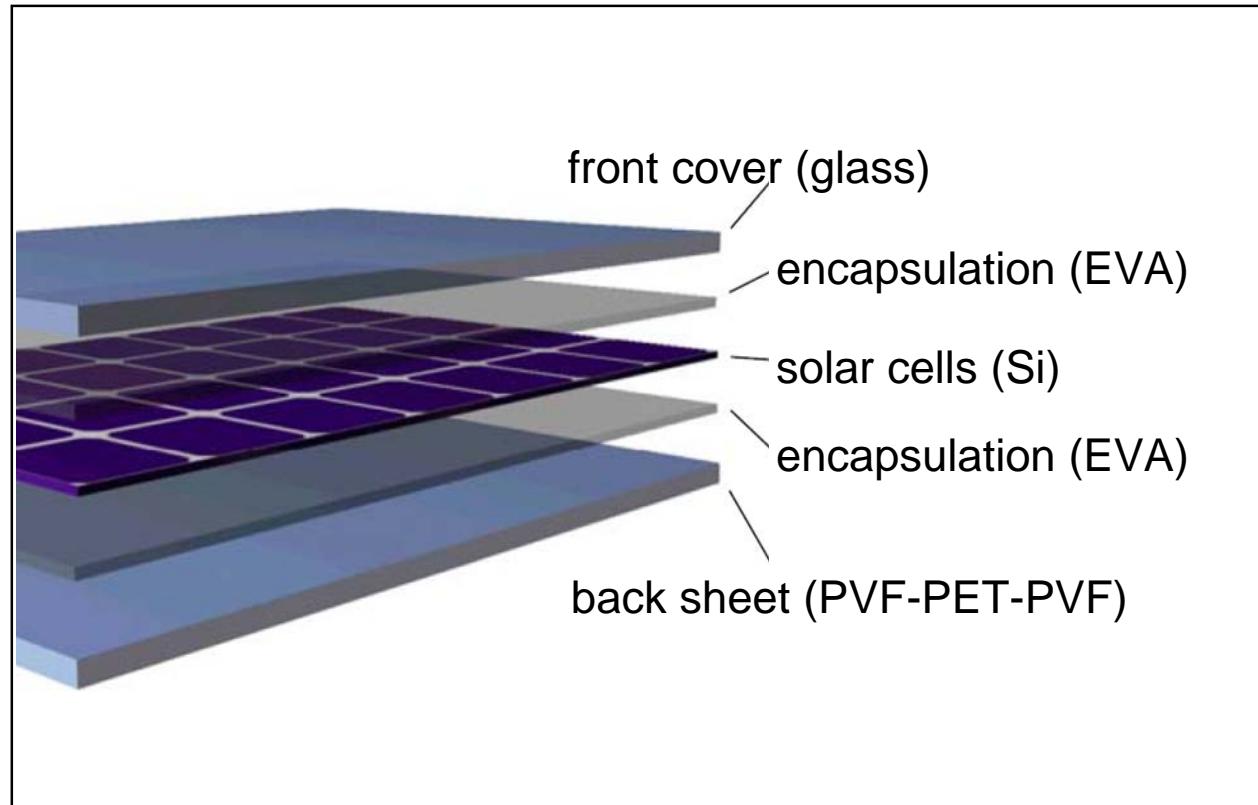

- Durability analysis
 - Accelerated testing to estimate degradation processes
 - Problem: Limits of acceleration, measurement of certain parameters
 - Simulation, **Example:** Mass transport of water within photovoltaic modules
- Virtual product qualification
 - New approaches for product design
 - Problem: Performance of materials during operation conditions
 - Simulation, **Example:** Calculation of mechanical loads on polymeric collectors

Multiphysics Simulation Approach

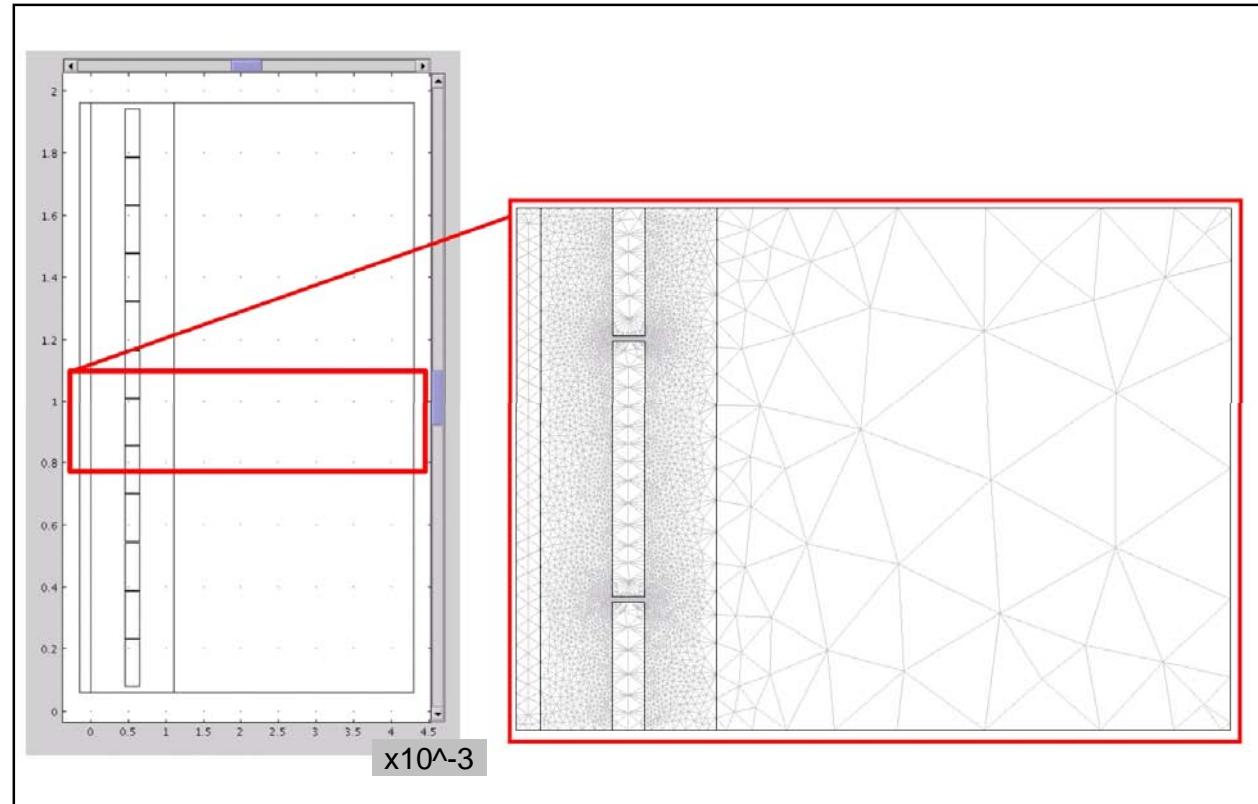

Mass transport of water within photovoltaic modules

- Mass transport of water is an essential reason for degradation of photovoltaic modules
- Micro climate inside module has to be calculated
- Given climates
- Given materials and geometries

Geometry and Mesh of 2D-Model

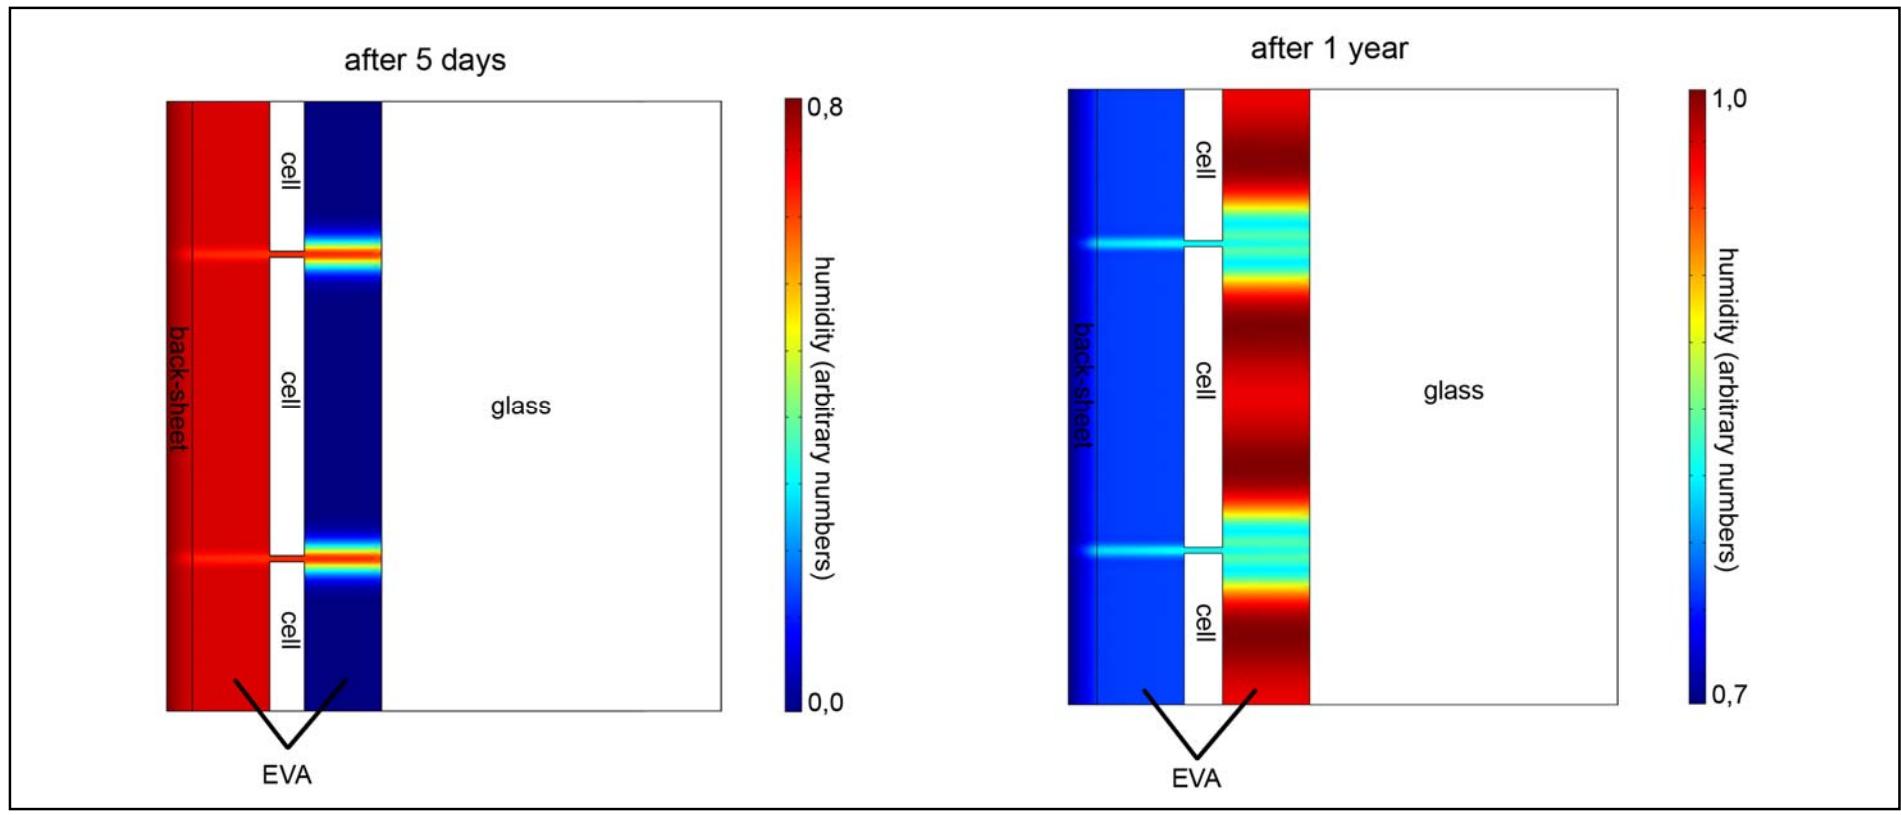

- Cutout of two cells
- Results of analysis of parameter sensitivity
 - Very high resolution of mesh required between cells
 - Finite stretching of elements possible

Jochen Wirth, Steffen Jack, Michael Köhl, Karl-Anders Weiß, Fraunhofer ISE, COMSOL Conference Hannover, 2008

5

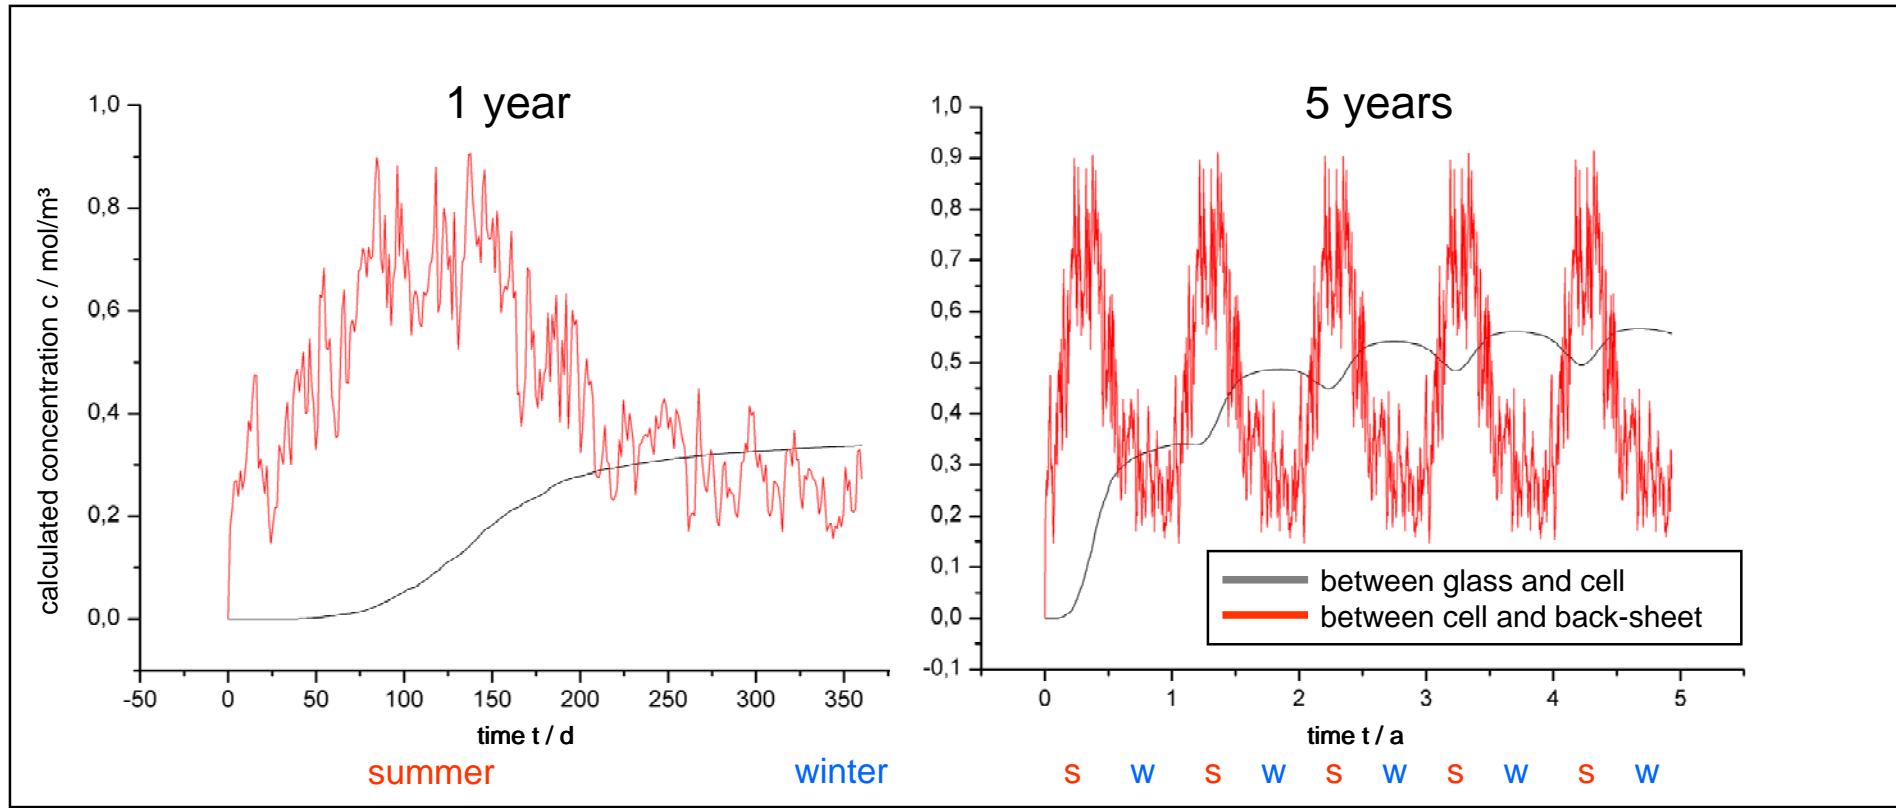

Results of the 2D simulations – Freiburg, Germany

Jochen Wirth, Steffen Jack, Michael Köhl, Karl-Anders Weiß, Fraunhofer ISE, COMSOL Conference Hannover, 2008

6

Results of the 2D simulations – Freiburg, Germany

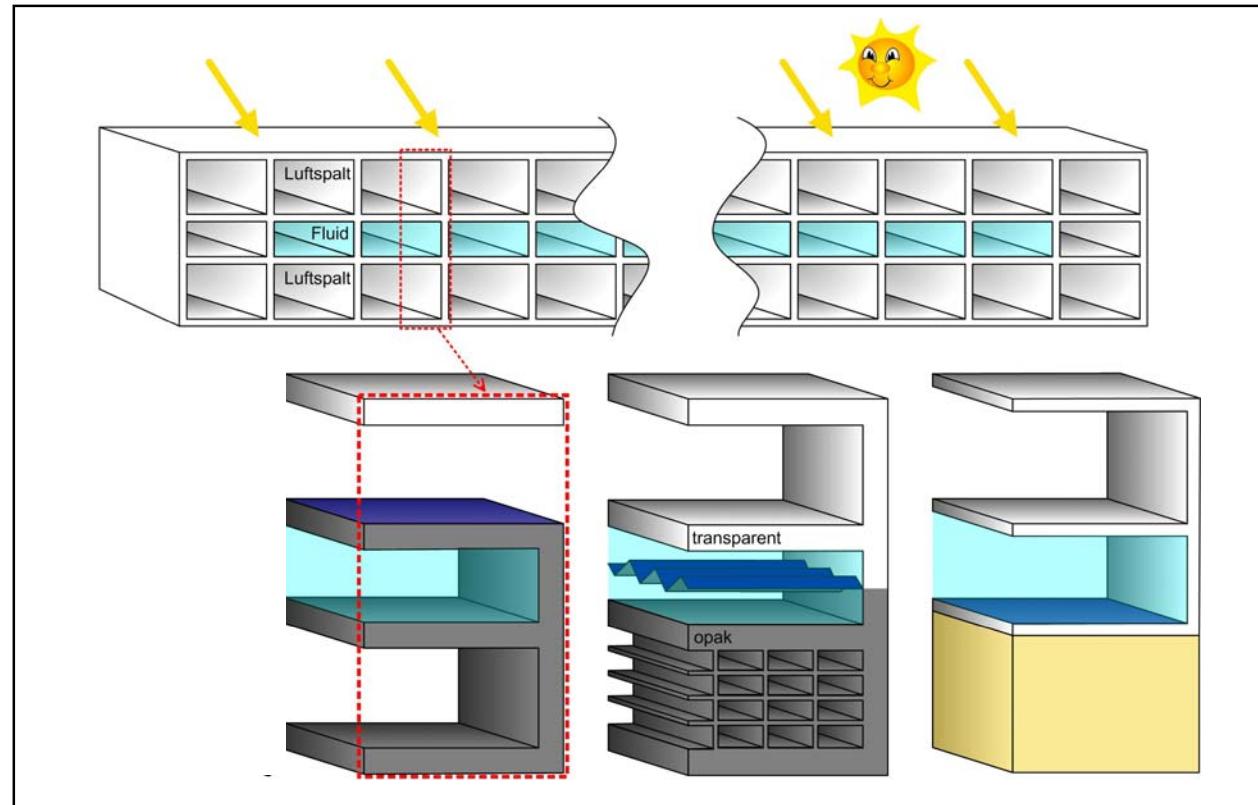

Jochen Wirth, Steffen Jack, Michael Köhl, Karl-Anders Weiß, Fraunhofer ISE, COMSOL Conference Hannover, 2008

7

All polymeric flat plate collector - considered geometry

- Cost reduction
 - Substitution of materials
 - Integrated design
- Triple wall-sheet
 - Integrated Design
 - Extrudable
 - Front cover
 - Back insulation
 - Holohedral absorber

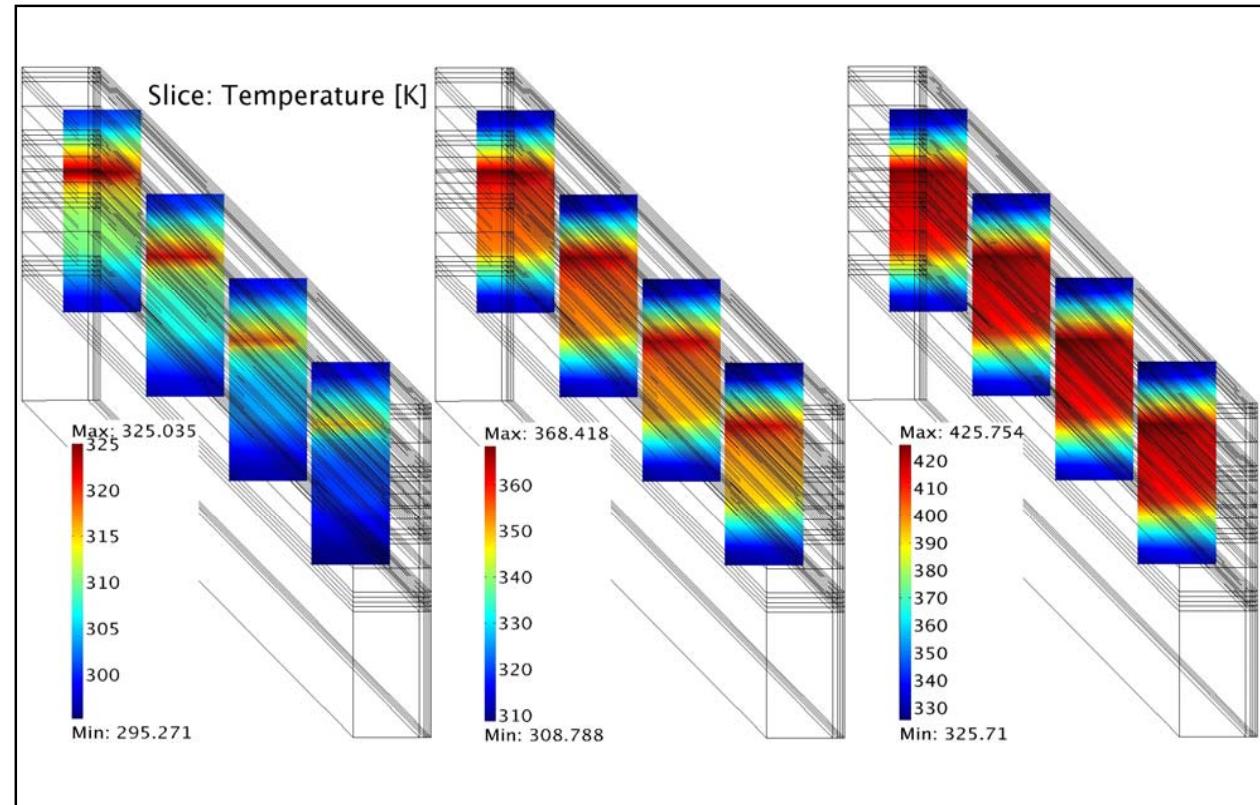

Jochen Wirth, Steffen Jack, Michael Köhl, Karl-Anders Weiß, Fraunhofer ISE, COMSOL Conference Hannover, 2008

8

Temperature distributions and levels

- High temperature gradient in wall with absorbing surface
- Typical stagnation temperatures
- Collector without stagnation protection calls for high performance polymers

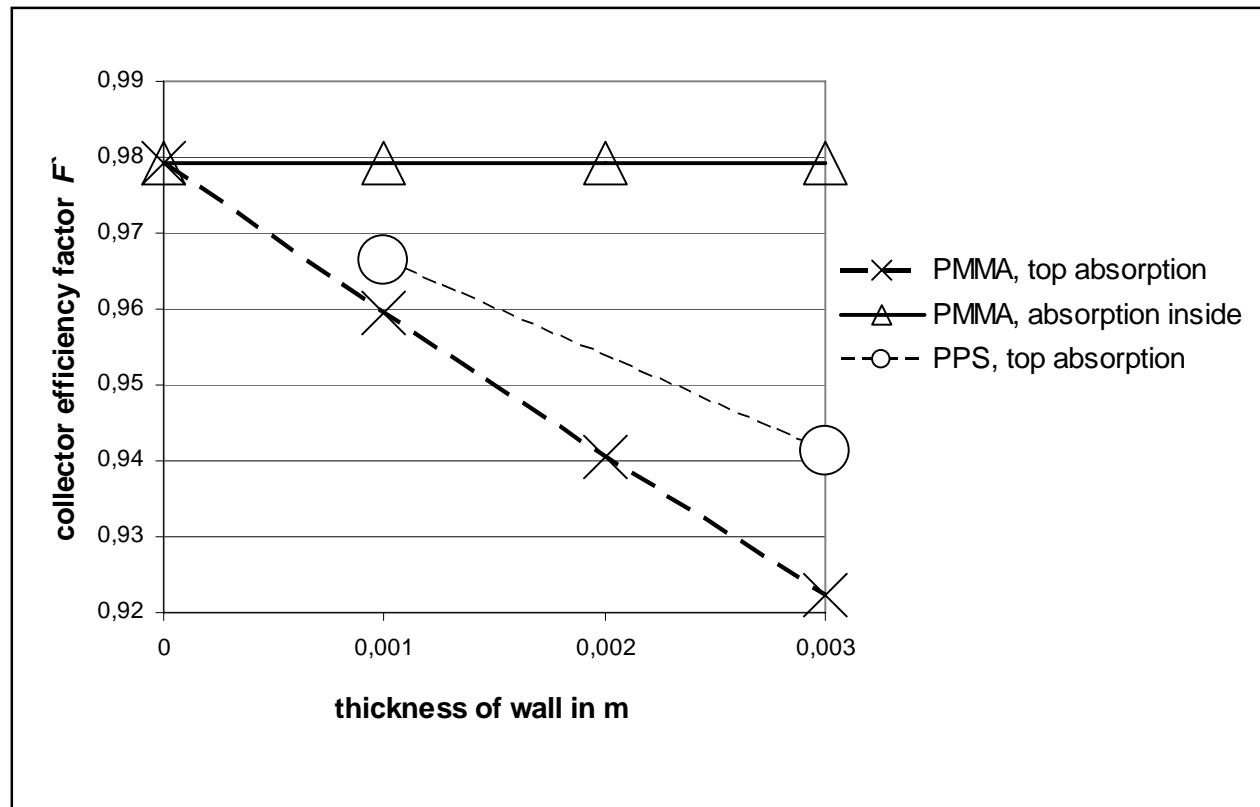

Jochen Wirth, Steffen Jack, Michael Köhl, Karl-Anders Weiß, Fraunhofer ISE, COMSOL Conference Hannover, 2008

9

Heat transfer capability of absorber

Variation of wall thickness and material

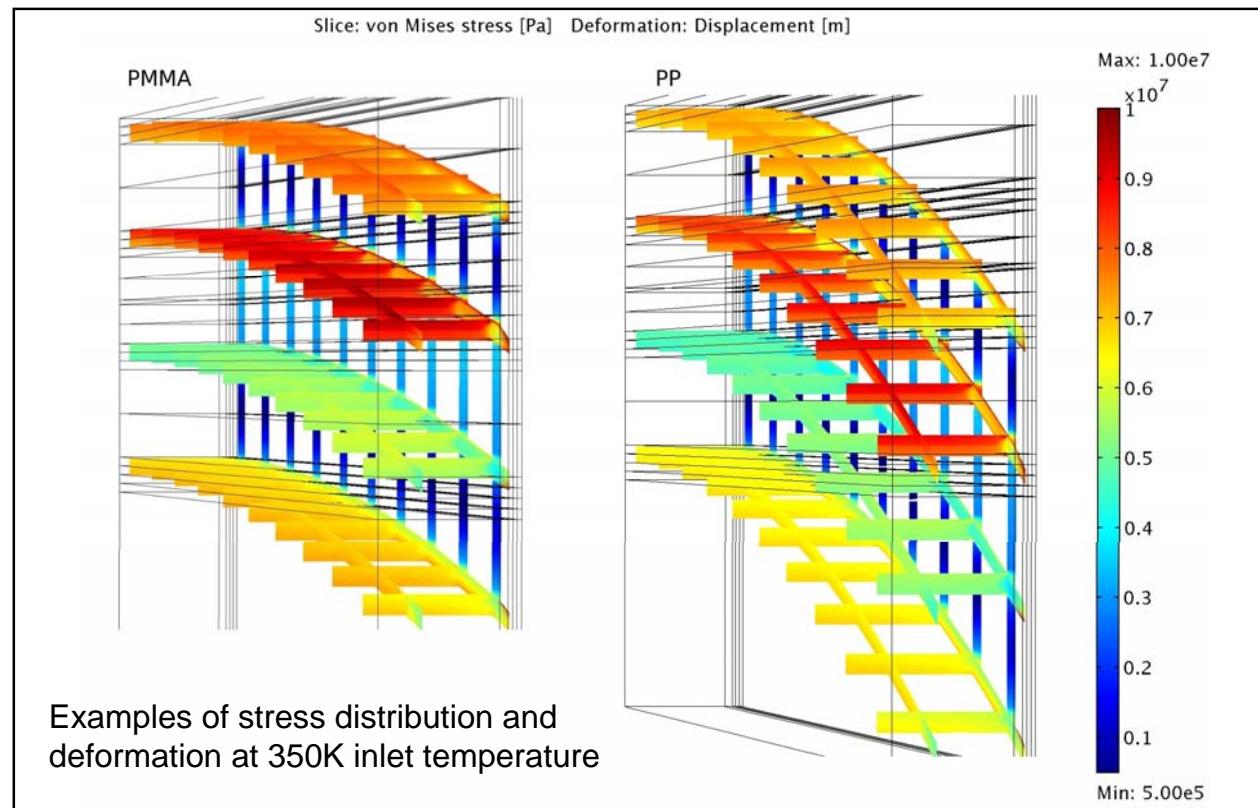

- Big influence of wall thickness and thermal conductivity of wall material
- Still acceptable collector efficiency factor at wall thickness 3mm

Thermo-mechanical loads

Variation of material and thickness in 3D model

- Max. stresses at absorbing layer
- Max. stresses below valid stresses for all considered configurations
- Downwards bending of the collector due to uneven thermal expansion

Jochen Wirth, Steffen Jack, Michael Köhl, Karl-Anders Weiß, Fraunhofer ISE, COMSOL Conference Hannover, 2008

11

Summary

- Calculated efficiency of polymer collectors can even be higher than of conventional solar thermal flat plate collectors
- Deformation of integrated collector design has to be considered
- Outlook:
 - Inclusion of change of material parameters over time
 - More precise modeling of thermal losses
- Development of concentration of water strongly depends on climate and materials
- Long time periods are needed until max. water concentration is reached
- Outlook:
 - Inclusion of change of material parameters over time
 - Simulation over 25 years

Thank you for your attention.
